Interior Commercial Texture System®

A Family of Durable, Mold and Mildew Resistant Texture Finishes

Traditional knockdown textures, orange peels and other decorative finishes can be created with Litex's Commercial Texture System line, the most comprehensive, 100% acrylic INTERIOR aggregate and non-aggregate textures available. All products in the system are mold and mildew resistant, durable, breathable, washable and can be tinted for a color-throughout finish.

Although decorative finishes can be created, the Classic Finishes are applied with standard texture spray equipment and boast unique end use features. They have been given names for easy reference and specification:

CTS 1000

Consists of a non-aggregate product (CTS Smooth) applied in two coats (a full coverage basecoat and a splatter/knockdown topcoat) over a properly prepared substrate. Additional features include the ease of application with only one product on the jobsite and the non-abrasive, elegant feel of the finish.

CTS 2000

Involves the application of a paint product (Mil-Kil Paint) as the basecoat and then a light aggregate texture (CTS Fine) applied in an orange peel, splatter or knockdown pattern. The resultant finish catches the light for a dramatic effect between the smooth paint and the texture topcoat. Multiple color finishes are possible with this system.

CTS 3000

Includes the use of a light sand aggregate (CTS Fine) texture applied as the basecoat (in an orange peel, splatter or knockdown pattern) followed by a paint (Mil-Kil Paint) topcoat. The key feature for this finish is the paint topcoat which simplifies the facility maintenance touch-up.

The abuse resistant texture finishes of the Commercial Texture System, while commonly approved and applied in national hotel chains, are now popular in schools, military facilities, hospitals and other high occupancy structures.
